

CALIFORNIA HEALTH CARE ALMANAC

California Hospital Facts and Figures

APRIL 2010

Introduction

California has 512 hospitals licensed to provide care in the state. Of those, 88 percent are general acute care (GAC) hospitals that treat patients for relatively brief but severe episodes of illness or trauma, and perform surgery. In 2007,* the GAC hospitals discharged over 3 million inpatients and cared for 42 million outpatients, including more than 10 million emergency department visits.

This report examines the state's GAC facilities, including their bed supply and capacity, geographic distribution, ownership type, utilization, and financial health. Selected quality measures and data on their readiness to withstand serious earthquakes are presented as well.

KEY FINDINGS INCLUDE:

- The number of hospitals and beds decreased from 2001 to 2007 — a period of continued growth in California's population.
- Californians age 80 and older are the highest users of hospital services, with 414 discharges per 1,000 population, compared to 91 per 1,000 for those age 50 to 59.
- Nonprofit hospitals are better off financially than their for-profit counterparts.
- Charity care provided by California hospitals rose 23 percent between 2001 and 2007.
- The seven largest hospital systems represent more than one-third of hospitals and licensed beds in the state.
- More than 200 acute care hospitals still have buildings that are in danger of collapse during an earthquake and must be replaced by 2013.

*Most recent data available at the time this analysis was conducted.

General Acute Care (GAC) Hospitals, California, 2001–2007

NUMBER OF HOSPITALS

Note: Includes suspended hospitals.

Sources: OSHPD Hospital Annual Utilization Report, 2001–2007. State of California, Department of Finance, *E-4 Population Estimates for Cities, Counties and the State, 2001–2009, with 2000 Benchmark*.

In 2007 there were 400 GAC hospitals in California. The number declined 4 percent between 2001 and 2007.

Licensed Beds vs. Population Growth, California, 2001–2007

Note: Excludes hospitals that were suspended the entire year.

Sources: OSHPD Hospital Annual Utilization Report, 2001–2007. State of California, Department of Finance, *E-4 Population Estimates for Cities, Counties and the State, 2001–2009, with 2000 Benchmark*. OSHPD Automated Licensing Information and Tracking System (ALIRTS).

The number of licensed beds also declined by 4 percent from 2001 to 2007. During the same time, the state's population increased by 9 percent.

Licensed Beds, by Bed Type, California, 2001–2007

NUMBER OF BEDS

Notes: Excludes hospitals that were suspended the entire year. Totals may not add to 100 percent due to rounding.

Sources: OSHPD Hospital Annual Utilization Report, 2001–2007. OSHPD Automated Licensing Information and Tracking System (ALITS).

While the number of general acute care beds remained stable, beds licensed for skilled nursing and psychiatric services decreased, reflecting the trend of hospitals moving toward more profitable general acute care services.

GAC Licensed Beds, by Bed Type, California, 2007

	LICENSED BEDS	
	NUMBER	PERCENT OF TOTAL
Medical/Surgical Acute (includes GYN)	47,429	68.1%
Perinatal (includes LDRP, excludes nursery)	6,560	9.4%
Intensive Care	5,845	8.4%
Intensive Care Newborn Nursery (NICU)	3,389	4.9%
Pediatric Acute	3,005	4.3%
Rehabilitation Center	1,710	2.5%
Coronary Care	1,514	2.2%
Burn Center	150	0.2%
Acute Respiratory Care	61	0.1%
Total, General Acute Care	69,663	

Almost 70 percent of acute care beds are adult medical/surgical beds. Intensive care beds (adult and newborn) represent over 13 percent of total beds.

Notes: Due to incomplete reporting by GAC bed type, the total GAC beds is .02 percent lower than that reported on other slides. Excludes hospitals that were suspended the entire year. Total may not add to 100 percent due to rounding.

Sources: OSHPD Annual Hospital Utilization Report, 2007. OSHPD Automated Licensing Information and Tracking System (ALIRTS).

Staffed Beds Per 1,000 Population, Ten Most Populous States, 2007

Notes: Data are for community hospitals, which represent 85 percent of all hospitals. Federal hospitals, long term care hospitals, psychiatric hospitals, institutions for the mentally retarded, and alcoholism and other chemical dependency hospitals are not included. Community hospitals, which includes some specialty hospitals, represents a slightly larger group of hospitals than GAC hospitals, as defined here.

Source: American Hospital Association Chartbook, 2009.

California Hospital Facts and Figures

Supply and Capacity

[<< RETURN TO CONTENTS](#)

California has the fewest beds per 1,000 among the ten most populous states. Interestingly, states with certificate-of-need (CON)* laws have more hospital beds per 1,000 population than California.

*Certificate of Need (CON) is a regulatory review process that requires certain health care providers, such as hospitals, to obtain authorization from the state before building new facilities, acquiring high-cost medical equipment, or expanding beds.

GAC Hospitals and Licensed Beds, by Region, California, 2007

Nearly one in four hospitals and one in three beds are located in Los Angeles County, which is home to 28 percent of Californians.

Notes: Excludes hospitals that were suspended the entire year. Counties within each region are listed in [Appendix D](#).

Sources: OSHPD Hospital Annual Utilization Report, 2007. State of California, Department of Finance, *E-4 Population Estimates for Cities, Counties and the State, 2001–2009, with 2000 Benchmark*. OSHPD Automated Licensing Information and Tracking System (ALIRTS).

GAC Hospital Closures, by Region, California, 2001–2007

	HOSPITALS		LICENSED BEDS	
	NUMBER	PERCENT OF TOTAL	NUMBER	PERCENT OF TOTAL
Central Coast	2	7%	420	12%
Greater Bay Area	3	11%	276	8%
Inland Empire	0	0%	0	0%
Los Angeles County	11	41%	2,042	58%
Northern and Sierra	3	11%	136	4%
Orange County	3	11%	284	8%
Sacramento Area	0	0%	0	0%
San Diego Area	1	4%	162	5%
San Joaquin Valley	4	15%	172	5%
Total	27	100%	3,492	100%

Notes: Includes four hospitals that closed during 2007. Counties within each region are listed in [Appendix D](#).

Sources: OSHPD Hospital Annual Utilization Report, 2007. *The Financial Health of California Hospitals*, California HealthCare Foundation, June 2007. OSHPD Automated Licensing Information and Report Tracking System (ALIRTS).

Since 2001, 27 hospitals closed, resulting in a loss of about 3,500 beds. Forty-one percent of these hospitals and 58 percent of the beds were in Los Angeles County. During the same period, six hospitals opened with 373 beds.

Licensed Beds Per 1,000 Population, by Region, California, 2007

Notes: Excludes hospitals that were suspended the entire year. Counties within each region are listed in [Appendix D](#).

Sources: OSHPD Hospital Annual Utilization Report, 2007. State of California, Department of Finance, *E-4 Population Estimates for Cities, Counties and the State, 2001–2009, with 2000 Benchmark*. OSHPD Automated Licensing Information and Tracking System (ALIRTS).

Access to acute care, as measured by licensed beds per 1,000 population, varies by region, from a low of 1.7 to a high of 2.5.

GAC Hospitals and Licensed Beds, by Ownership, California, 2007

Nonprofit hospitals account for the majority of hospitals and beds — 57 percent of hospitals and 62 percent of beds. By contrast, investor-owned facilities tend to be smaller, representing 23 percent of the hospitals but fewer than one in five beds.

*Public hospitals include University of California, city, and county hospitals.

Note: Excludes hospitals that were suspended the entire year.

Source: OSHPD Hospital Annual Utilization Report, 2007.

Largest Hospital Systems, Hospitals and Beds, California, 2007

	HOSPITALS		LICENSED BEDS	
	NUMBER	PERCENT OF TOTAL	NUMBER	PERCENT OF TOTAL
Catholic Healthcare West	30	8%	7,088	9%
Kaiser	31	8%	7,039	9%
Sutter Health	27	7%	5,182	6%
Tenet Healthcare	20	5%	3,824	5%
University of California	8	2%	3,215	4%
Adventist Health System	15	4%	2,753	3%
St. Joseph Health System	11	3%	1,853	2%
All Others	252	64%	49,662	62%
Total	394		80,616	

The seven largest hospital systems account for more than one-third of the hospitals and licensed beds in California. Together Catholic Healthcare West and Kaiser account for nearly one out of every five beds.

Notes: Excludes hospitals that were suspended the entire year. See [Appendix C](#) for system hospitals and beds by region. Totals may not add to 100 percent due to rounding.

Source: OSHPD Hospital Annual Utilization Report, 2007.

Admissions Per 1,000 Population, California vs. United States, 2001–2007

Notes: Data are for community hospitals, which represent 85 percent of all hospitals. Federal hospitals, long term care hospitals, psychiatric hospitals, institutions for the mentally retarded, and alcoholism and other chemical dependency hospitals are not included. Community hospitals, which include some specialty hospitals, represent a slightly larger group than GAC hospitals, as defined here.

Source: American Hospital Association.

A smaller proportion of Californians are being admitted to hospitals. Admissions per 1,000 population declined by 9 percent in California, compared to 2 percent nationally over the past seven years.

It is likely that the shift to outpatient care slowed the growth in inpatient utilization.

Discharges per 1,000 Population, by Age Group, California, 2007

Utilization of hospital services is significantly higher for the elderly population. By 2030, the population over age 70 is projected to more than double.

Inpatient Acuity, California, 2001–2007

MEDIAN CASE MIX INDEX*

*The Case Mix Index (CMI) is a measure of the relative cost or resources needed to treat the mix of patients in each licensed California hospital during the calendar year. To calculate the CMI, OSHPD uses Medicare Severity-Diagnosis Related Groups (MS-DRG) and their associated weights assigned to each MS-DRG by the Centers for Medicare & Medicaid Services (CMS). See an example at www.oshpd.ca.gov.

Source: OSHPD Case Mix Index, 1996–2007.

The median case mix index has risen slightly, indicating that patients being admitted to acute care hospitals in 2007 were sicker, on average, than those admitted in 2001.

Hospital Discharges, by Source of Admission, California, 2007

TOTAL DISCHARGES: 3.5 MILLION

The emergency department is a critical point of entry for hospital admissions. In 2007 almost half of the state's 3.5 million hospital inpatients were admitted through the ED.

Notes: Excludes normal newborns.

Source: OSHPD Patient Discharge Data, 2007.

Discharge Destination, California, 2007

Notes: Excludes normal newborns. Discharges included in "Other" category include discharges to prison, residential care, acute care, and unknown locations.

Source: OSHPD Patient Discharge Data, 2007.

Upon discharge, a large majority of patients are sent home. As a result, the transition to home care is important to the patient's recovery. Sixty-seven percent of patients discharged from hospitals participating in the CHART* report card of hospital performance said they received adequate information during the discharge process.

*See description of CHART at www.chcf.org.

Hospital Discharges, by Diagnosis Group, California, 2001 and 2007

(IN THOUSANDS)

Notes: Excludes births, approximately 516,000 in 2001 and 555,000 in 2007. There are small differences between data using OSHPD Patient Discharge Data and OSHPD Patient Discharge Pivot Table Data. This difference is attributable to the timing of updates to multiple OSHPD products based on discharge data.

Source: OSHPD Patient Discharge Data Pivot Table, 2001 and 2007.

The top five major reasons for hospital stays accounted for over 60 percent of all discharges in 2007. Pregnancies were the most frequent cause of hospital stays, accounting for almost one in five discharges. Heart disease discharges declined by 10 percent from 2001 to 2007.

Average Length of Stay (ALOS), Ten Most Populous States, 2007

The average length of stay in California hospitals was lower than the national average, but comparable to other high-population states in 2007. Nationally, the average was 5.8 days, with a high of 10.1 days (South Dakota) and a low of 4.4 days (Oregon).

Notes: Data are for community hospitals, which represent 85 percent of all hospitals. Federal hospitals, long term care hospitals, psychiatric hospitals, institutions for the mentally retarded, and alcoholism and other chemical dependency hospitals are not included. Community hospitals, which include some specialty hospitals, represent a slightly larger group of hospitals than GAC hospitals, as defined here. ALOS is not adjusted for case mix differences.

Sources: American Hospital Association Chartbook, 2009. United States Census Bureau State Population Estimates, 2000–2008.

Hospital Outpatient Visits, Total and Per 1,000 Population, California, 2001–2007

Total Outpatient Visits (in millions)

In 2007, hospitals had almost 42 million outpatient visits, a decline of 4 percent from 2001. The per-population drop was even greater, at 12 percent.

The decline in outpatient services reflects a movement from hospital outpatient departments to other ambulatory settings.

Notes: A visit is an appearance of an outpatient in the hospital for ambulatory services or the appearance of a private referred outpatient in the hospital for ancillary services. The patient is typically treated and released the same day. Included are outpatient ED visits, clinic visits, referred ancillary service visits, home health care visits and day care days. Also included are outpatient chemical dependency visits, hospice outpatient visits, and adult day health care visits.

Sources: OSHPD Hospital Annual Financial Data, 2001–2007; State of California, Department of Finance, *E-4 Population Estimates for Cities, Counties and the State, 2001–2009, with 2000 Benchmark*.

Emergency Department Beds and Visits Per Bed, California, 2001–2007

While the number of ED beds increased between 2001 and 2007, utilization of ED services held relatively steady, resulting in a decline in emergency visits per ED bed.

Notes: Excludes hospitals that were suspended the entire year and non-responders.

Source: OSHPD Hospital Annual Utilization Report, 2001–2007.

Emergency Department Visits Per 1,000 Population, California, 2001 and 2007

ED visits per 1,000 population decreased almost 5 percent between 2001 and 2007.

Note: Excludes hospitals that were suspended the entire year, and non-responders.

Sources: OSHPD Hospital Annual Utilization Report, 2001-2007. State of California, Department of Finance, *E-4 Population Estimates for Cities, Counties and the State, 2001-2009, with 2000 Benchmark*.

Emergency Department Visits, by Level of Acuity, California, 2003 and 2007

NUMBER OF VISITS (IN MILLIONS)

Note: Excludes hospitals that were suspended the entire year, and non-responders.

DEFINITIONS: Acuity levels: "Severe with Threat": A case with high urgency that poses an immediate threat to the patient's life or psychological wellbeing (example: severe gastrointestinal bleeding). "Severe Without Threat": A case with high urgency but does not pose threat to patient's life or wellbeing (example: elderly female who has fallen and is complaining of hip pain). "Moderate": A case that requires an expanded problem-focused history/examination, and medical decisionmaking of moderate complexity (example: patient with inversion ankle injury who is unable to bear any weight). "Low/Moderate" (example: minor traumatic injury with localized pain). "Minor": An ED visit that requires a problem-focused history/examination, and straightforward medical decisionmaking (example: removal of sutures). Acuity level definitions may be found at www.oshpd.state.ca.us.

Source: OSHPD Hospital Annual Utilization Report, 2003 and 2007.

Hospital ED patients were sicker in 2007 than those seen in 2003. The proportion of visits classified as severe increased from 27 percent in 2003 to 34 percent in 2007.

Staffing Per Adjusted Occupied Bed, California, 2001 and 2007

FTE PER ADJUSTED OCCUPIED BED

Staffing per bed increased 13 percent between 2001 and 2007. Total nurse staffing increased nearly 20 percent. This shift was likely due to higher patient acuity and new minimum nurse staffing ratios.

Notes: Adjusted occupied beds = (occupancy rate × number of beds) × (total gross patient revenue ÷ gross inpatient revenue). FTE (full time employee) classification is based on labor productivity by employee classification. The "All Other" category includes positions excluded from other classifications, e.g., ambulance driver, laboratory assistant, and child care worker. Data presented are for productive hours.

Source: OSHPD Hospital Annual Financial Data, 2001 and 2007.

Hospital Margin Trends, Total and Operating, California, 2001–2007

MEDIAN MARGIN

Notes: Total margin = pre-tax net income ÷ total operating revenue (net patient revenue + other operating revenue). The total margin, reflecting the profitability of both patient and non-patient care activities is commonly higher than the operating margin. Examples of non-operating revenue include unrestricted contributions, income and gains from investments, and various government assessments, taxes, and appropriations. The median total margin is the margin at which half the hospitals are above the value and half are below the value.

Source: California HealthCare Foundation, California Hospital Financial Performance, www.calhospitalfinance.net.

The median total margin remained relatively stable between 2001 and 2007. As operating margins fell, profits from activities not directly related to providing health care — nonoperating margins — buoyed the total margins.

Hospital Margins, Total and Operating, by Range, California, 2001 and 2007

PERCENT OF HOSPITALS IN MARGIN RANGE

Total margins and operating margins improved overall between 2001 and 2007.

In 2007, 55 percent of hospitals had positive operating margins, while 68 percent had positive total margins, which points to the importance of non-patient care revenues.

Notes: Total margin = pre-tax net income ÷ total operating revenue (net patient revenue + other operating revenue). The total margin, reflecting the profitability of both patient and nonpatient care activities is commonly higher than the operating margin. Examples of non-operating revenue include unrestricted contributions, income and gains from investments, and various government assessments, taxes, and appropriations. These data do not include Kaiser hospitals, which do not report patient revenue at the facility level, but do report financial data at the regional level. For 2001 and 2007, total margins were 11.5 percent and 17.0 percent for Kaiser North, and 9.4 percent, and 16.1 percent for Kaiser South, respectively. No hospital had a margin of 0. Numbers may not add to 100 percent due to rounding.

Source: OSHPD Hospital Annual Financial Data, 2001–2007.

Total Margins, by Ownership Type and Range, California, 2007

PERCENT OF HOSPITALS IN MARGIN RANGE

In general, nonprofit hospitals fared better financially than other ownership categories. In 2007 a smaller proportion of nonprofit hospitals had negative total margins, and a greater proportion had margins exceeding 8 percent, compared to hospitals in other ownership categories.

*Public hospitals include University of California, city, and county hospitals.

Notes: Total margin = pre-tax net income ÷ total operating revenue (net patient revenue + other operating revenue). These data do not include Kaiser hospitals, which report financial data at the regional level. For 2007, total margins were 17.0 percent for Kaiser North, and 16.1 percent for Kaiser South. Numbers may not add to 100 percent due to rounding.

Source: OSHPD Hospital Annual Financial Data, 2007.

Hospital Discharges and Revenue, by Payer, California, 2007

Hospitals relied heavily on private payers, which contributed almost half of patient revenue while accounting for only one-third of discharges.

Notes: There are small differences between data using OSHPD Patient Discharge Data and OSHPD Patient Discharge Pivot Table Data. This difference is attributable to the timing of updates and to multiple OSHPD products based on discharge data. Discharges do not include newborns. Net revenue does not include Kaiser. Numbers may not add to 100 percent due to rounding.

Sources: OSHPD Patient Discharge Data, 2007. OSHPD Annual Financial Data, 2007.

Operating Revenue and Expenses Per Adjusted Patient Day, California, 2001–2007

MEDIAN VALUES

■ Operating Revenue ■ Operating Expense

Median operating revenue and expenses per adjusted patient day both increased almost \$800 between 2001 and 2007. The average annual growth rate of almost 8 percent was nearly double the medical consumer price index, which rose approximately 4 percent each year during the same period.

Notes: Kaiser data are excluded. Adjusted patient days = total gross patient revenue ÷ gross inpatient revenue × number of patient days. The purpose of "adjusting" the patient days is to recognize outpatient utilization.

Sources: OSHPD Hospital Annual Financial Data, 2001–2007. Medical CPI-U from the Bureau of Labor and Statistics, 2009, www.buckconsultants.com.

Charity Care and Bad Debt, California, 2001–2007

2007 DOLLARS (IN MILLIONS)

The amount of charity care rose 23 percent in inflation-adjusted dollars between 2001 and 2007. Another measure of charity care that includes bad debt increased 19 percent during the same period.

Notes: Charity care and bad debt are adjusted by the hospital-specific cost-to-charge ratio and adjusted for medical inflation. The data have been adjusted to use 2007 dollars, using hospital CPI. Kaiser data are included at a regional level.

Sources: OSHPD Hospital Annual Financial Data, 2001–2007. Hospital CPI from Bureau of Labor Statistics, www.buckconsultants.com.

Preventable Adverse Events at California Hospitals, 2008

In July 2007, California began requiring hospitals to report 28 types of adverse events. In the first year of reporting, more than half of the reported events concerned patients acquiring stage 3 or 4 pressure ulcers after admission. Hospitals also reported 165 instances of foreign objects left in a patient's body and 26 surgeries performed on a wrong body part.

Note: Events reported from July 1, 2007 to June 30, 2008.
Source: California Department of Public Health.

Surgical Care and Complication Prevention Measures, California vs. United States, 2009

California has performed slightly better than the nation on reported patient safety measures.

Hospital Seismic Requirements, by Region, California, 2009

PERCENT OF HOSPITALS WITH...

■ SPC-1 Buildings ■ No SPC-1 Buildings

Notes: SPC-1 ("collapse hazard") buildings must be removed from service by 2013. Counties within each region are listed in [Appendix D](#).

Source: OSHPD, Facilities Development Division SB1661, *Counties with Acute Care Hospitals SPC-1 Buildings*.

Many California hospitals face seismic mandates. More than 200 acute care hospitals still have buildings that are in danger of collapse during an earthquake and must be replaced by 2013 or be removed from service. Three in four hospitals in Los Angeles County fall into this category.

Hospital Seismic Requirements, by Ownership, California, 2009

PERCENT OF HOSPITALS WITH...

*Public hospitals include University of California, city, and county hospitals.

Sources: OSHPD, Facilities Development Division SB1661, *Counties with Acute Care Hospitals SPC-1 Buildings*. OSHPD Utilization Data, 2007.

Over 70 percent of public hospitals are faced with the need to replace buildings in danger of collapsing during an earthquake.

Methodology

This report focuses on a subset of general acute care hospitals and excludes psychiatric hospitals, chemical dependency recovery hospitals, long term acute care hospitals, state hospitals, rehabilitation facilities, skilled nursing and long term care facilities, and the Shriners Hospitals for Children.

The analysis relies primarily on reports that state licensed hospitals submit to the California Office of Statewide Health Planning and Development (OSHPD). These include the Hospital Annual Financial Data (HAFD) Report, the Hospital Annual Utilization Data, the Patient Discharge Data, and Automated Licensing Information and Report Tracking System (ALIRTS). Other publicly available sources are the State of California Department of Finance, the Kaiser Family Foundation, and the American Hospital Association.

Hospitals that did not report utilization data but were open for operation during a given year are referred to as non-responders. Some information for these non-responders, such as licensed beds, is taken from ALIRTS.

The HAFD reports consist of financial and utilization information. The OSHPD financial data are submitted based on license and may include multiple facilities, some of which may be non-acute care hospitals.

Kaiser Foundation hospitals report financial information for the Northern and Southern California regions, but not for individual hospitals. Therefore Kaiser hospitals are excluded from pages with financial analyses; footnotes provide regional data.

Appendix B: Hospitals Included in this Report

In this chart, hospitals that reported data in a given year are marked with an x. Those licensed to operate during any part of a given year that did not report utilization data (non-responders) are marked with an NR. Hospitals closed for an entire year are marked with a C. Those suspended for an entire year are marked with an S. Hospitals not yet licensed are marked with an NYL.

OSHPD ID	HOSPITAL NAME	2001	2002	2003	2004	2005	2006	2007
